# Resume

**Name:** Qian Jiahong
**Telephone:** 19921057118
**address:** Shanghai
**GitHub:** github.com/lxcxjxhx
**arXiv:** arxiv.org/search/?query=JH-Qian
**Education:** Undergraduate student
**Mail:** aqfxz_zh@qq.com
**blog:** security-hyacinth.blog.csdn.net 4000+ followers
**LinkedIn:** linkedin.com/in/jiahong-qian

## Internship experience

### NSFOCUS Technology Group Co., Ltd. Shanghai Branch
2025.7 – 2026.7

**Intern Security Engineer**

- **Security product delivery and operation and maintenance**: Independently responsible for policy configuration, rule optimization and fault handling of security equipment such as firewalls, WAF, RSAS, etc., participating in the delivery of compliance projects for financial/manufacturing customers, covering the entire process of solution implementation and acceptance.
- **AI empowers security operations • PoC**: Participated in the company's "Security Operations-AI Empowerment Task Force" and led the research on large model-assisted alarm analysis technology: built a localized RAG prototype system based on LangChain, completed log vectorization storage and Prompt engineering optimization, and the research report passed the special group review and was incorporated into the technical plan.
- **Self-developed efficiency improvement tools put into production**: Self-designed rule automated inspection and repair tool HOS-LS, submitted to the NSFOCUS project delivery tool platform and put into internal trial; building a lightweight security knowledge base BOS-NI, integrates semantic retrieval capabilities to support problem locating for new employees.

## Project experience

### Security Hyacinth – AI+ information security attack and defense training platform
2024.9 – 2025.6

**Person in Charge & Software Development | Won the National Award for the Sino-US Maker Track**

- Led a team of 6 people to build an integrated training platform for "attack simulation-log audit-intelligent response" and was responsible for the overall architecture design and technology selection.
- **Core technology attack**: based on **Qwen-14B** Command fine-tuning (LoRA), combined with **Neo4j knowledge graph** and **PPO reinforcement learning** Optimize vulnerability exploitation path recommendations; implement command line intelligent auxiliary modules to open up platform command line operation links.
- **Project implementation**: Design attack log classification and visual response modules to achieve rapid source tracing of abnormal behaviors. Achievements: Sino-US Maker National Award; software copyright review in progress, patent drafting in progress.

### Intelligent Medical Language Companion Robot – Medical AI Dialogue System
2023.9 – 2024.6

**Team Members & AI Application Development | Intel AI Innovation Competition Finalist**

- Based on the "AI PC" platform, I develop an intelligent consultation assistance robot for grassroots clinics. I am responsible for the privacy security and AI interaction modules.
- **Privacy security and AI interaction**: Design end-to-end communication encryption and sensitive content identification mechanism (BERT fine-tuning classifier) to ensure medical data compliance; participate in the development of speech recognition (Whisper fine-tuning) and intent understanding (LLM Few-shot).
- Shortlisted for the Intel Innovation and Entrepreneurship Special Competition (GBAC240303106392), the plan passed the technical review of the organizer and entered the special track.

## Skills & Certifications

**Core competencies:** AI system engineering (PyTorch/LangChain full pipeline, RAG, LoRA/QLoRA fine-tuning, Neo4j knowledge graph) and AI security (offense and defense, vulnerability mining) in parallel; proficient in using [CC] / Codex / DSH / Pi, mastering MCP and Skill encapsulation.

**Directions to explore:** Cutting-edge architectures such as reinforcement learning (PPO), AI Agent development, and model compression distillation.

**other:** English CET-6 | Mandarin Level 2 B | EFG Entrepreneurship Training Camp Completion (75th Issue) | Computer Level 1 | C2 Driver's License

## Open source contributions (all merged PRs)

- **Merged** hiyouga/LlamaFactory 74,000 stars #10626 - Improve the Getting Started Guide documentation to lower the threshold for fine-tuning large models
- **Merged** axolotl-ai-cloud/axolotl 74,000 stars #3802 - Fix Jinja chat template verification error prompt logic
- **Merged** vanhauser-thc/thc-hydra 12,000 stars #1092 Buffer overflow |#1091 Memory leak | 6 merged security fix PRs
- **Merged** aquasecurity/trivy 38,000 stars #11013 - Fix type assertion in Alpine APKINDEX archive reading
- **Merged** zaproxy/zaproxy 16,000 stars #9411 - HashUtils resource leak fix
- **Merged** slimm609/checksec 2.3k stars #349 - Fix kernel.unprivileged_bpf_disabled detection logic
- **Merged** bytedance/g3 888 stars #1103 - Fix unsafe unwrap() call in openssl certificate pair

## introduce yourself

AI engineering × system security dual stack: Independently delivers the full pipeline of AI applications from data to deployment (LoRA/QLoRA fine-tuning, RAG, LangChain orchestration), and also locates and repairs underlying security issues (OpenSSL, memory leaks, buffer overflows). Repair PRs submitted to mainstream open source projects such as LlamaFactory, axolotl, trivy, and zaproxy have all been merged; the leading offensive and defensive training platform won the Sino-US Maker National Award.
