Internship experience

NSFOCUS Technology Group Co., Ltd. Shanghai Branch
2025.7 – 2026.7

Intern Security Engineer

- **Security product delivery and operation and maintenance**: Responsible for policy configuration, rule tuning and fault handling of security devices such as firewalls, WAF, RSAS, etc., and participating in the delivery and acceptance of compliance projects for financial/manufacturing customers.
- **AI for security operations • PoC**: joined the Security Operations / AI task force to test whether LLMs can triage alerts: built a local RAG prototype on LangChain, embedded historical alert logs into a vector store, and tuned prompts until the model produced alert merging and triage suggestions; prototype and findings went to the task force for review.
- **Self-built and open-sourced**: HOS-LS is a security scanner for AI-generated code (AGPL-3.0, 86 commits / 32 tests): a Semgrep/bandit → CodeQL → LLM cascade with LangGraph orchestrating 7 agents, where the static stage screens a file in 5.3s so LLM analysis only runs on the shortlisted candidates. On 50 RepoPairBench pairs: 42% confirmed findings, 28% false positives on patched code, versus roughly 90% for a bare LLM. Also open-sourced BOS-NI, which distills AI security operations write-ups into reusable Skill / Agent / Workflow designs.

Project experience

Security Hyacinth – AI+ information security attack and defense training platform
2024.9 – 2025.6

Person in Charge & Software Development | Won the National Award for the Sino-US Maker Track

- Led a team of 6 people to build an integrated training platform for "attack simulation-log audit-intelligent response" and was responsible for the overall architecture design and technology selection.
- **Core technology attack**: based on **Qwen-14B** Command fine-tuning (LoRA), combined with **Neo4j knowledge graph** and **PPO reinforcement learning** Optimize vulnerability exploitation path recommendations; implement command-line assistance modules connecting the platform CLI.
- **Project implementation**: Design attack log classification and visual response modules to achieve rapid source tracing of abnormal behaviors. Achievements: Sino-US Maker National Award; patent preparation in progress.

Intelligent Medical Language Companion Robot – Medical AI Dialogue System
2023.9 – 2024.6

Team Members & AI Application Development | Intel AI Innovation Competition Finalist

- Based on the "AI PC" platform, I develop an intelligent consultation assistance robot for grassroots clinics. I am responsible for the privacy security and AI interaction modules.
- **Privacy security and AI interaction**: Design end-to-end communication encryption and sensitive content identification mechanism (BERT fine-tuning classifier) to ensure medical data compliance; participate in the development of speech recognition (Whisper fine-tuning) and intent understanding (LLM Few-shot).
- Shortlisted for the Intel Innovation and Entrepreneurship Special Competition (GBAC240303106392), the plan passed the technical review of the organizer and entered the special track.

Skills & Certifications

Core competencies: Python / C / Go / Java / Rust multi-language (all PRs have been merged); PyTorch / LangChain (RAG, LoRA/QLoRA fine-tuning, Neo4j knowledge graph); MCP and Skill packaging, proficient in using Claude Code / Codex / DSH / Pi.
Intellectual property: 5 software copyrights (HOSxAI Registered 2025R11L0843188, the remaining 4 items are being accepted)
Certificate: Network Security Emergency Response Vocational Skill Level Certificate (Intermediate) | Neo4j Certified Professional | Hugging Face Agents Course / MCP Course Completion | English CET-6 | Mandarin Level 2 B | Computer Level 1 | C2 Driver's License

Open source contributions (all merged PRs)

- Merged hiyouga/LlamaFactory 74,000 stars #10626 - Improve the Getting Started Guide documentation to lower the threshold for fine-tuning large models
- Merged axolotl-ai-cloud/axolotl 74,000 stars #3802 - Fix Jinja chat template verification error prompt logic
- Merged vanhauser-thc/thc-hydra 12,000 stars #1092 Buffer overflow |#1091 Memory leak | 6 merged security fix PRs
- Merged aquasecurity/trivy 38,000 stars #11013 - Fix type assertion in Alpine APKINDEX archive reading
- Merged zaproxy/zaproxy 16,000 stars #9411 - HashUtils resource leak fix
- Merged slimm609/checksec 2.3k stars #349 - Fix kernel.unprivileged_bpf_disabled detection logic
- Merged bytedance/g3 888 stars #1103 - Fix unsafe unwrap() call in openssl certificate pair

introduce yourself

Job intention: AI Agent application development, algorithm engineering, back-end development; 7 upstream merger PRs and 5 software copyrights can prove this.
