Internship

Lvmeng Technology Group Co., Ltd. Shanghai Branch 2025.7 – 2026.7
Intern Security Engineer

- **Secure Product Delivery and O&M**: Independently undertake the policy configuration, rule tuning and fault handling of firewall, WAF, RSAs and other security equipment, participate in the delivery of guarantee compliance projects such as financial/manufacturing customers, and cover the entire process of scheme implementation and acceptance.
- **AI-enabled safe operation • PoC**: Participated in the company's "Security Operations-AI Empowerment Special Group", leading the large model-assisted alarm analysis technology research: built a localized rag prototype system based on LangChain, completed the log vector storage and Prompt engineering optimization, and the research report was reviewed by the special group and included in the technical program.
- **Self-developed and effective tools put into production**: Automated Inspection and Repair Tool for Self-Designed Rules HOS-LS, submitted to the Green Alliance Engineering Delivery Tool Platform and put into internal trial; build a lightweight safety knowledge base BOS-NI, integrate semantic retrieval capabilities to support the problem positioning of new employees.

Project Experience

Security Windshield Transducer – AI + Information Security Attack and Defense Training Platform 2024.9 – 2025.6
Leader & Software Development | Won the China-US Maker Track National Award

- Lead a team of 6 people to build an "attack simulation – log audit – intelligent response" integrated training platform, responsible for the overall architecture design and technical selection.
- **Core technology to tackle** Settings based on: **Qwen-14B** Instruction fine-tuning (LoRA), in conjunction with **Neo4j Knowledge Graph** AND: **PPO Reinforcement Learning** Optimize the vulnerability utilization path recommendation; implement the command-line intelligent auxiliary module to open the platform command-line operation link.
- **Project landing**: Design the attack log categorization and visual response module to achieve rapid traceability of abnormal behavior. Achievements: China-US Maker National Award; patent writing.

Intelligent Medical Language Companion Robot – Medical AI Dialogue System 2023.9 – 2024.6
Team Member & AI Application Development | Intel AI Innovation Competition Finalist

- Based on the "AI PC" platform, I develop intelligent consultation assistance robots for grassroots clinics, and am responsible for privacy security and AI interaction modules.
- **Privacy security interacts with AI**: Designed end-to-end communication encryption and sensitive content recognition mechanism (Bert fine-tuning classifier) to ensure medical data compliance; participated in speech recognition (Whisper fine-tuning) and intent understanding (LLM Few-shot) development.
- Shortlisted for the Intel Innovation and Entrepreneurship Special Competition (GBAC240303106392), the program passed the organizer's technical review and entered the special circuit.

Skills & Certifications

Core capabilities: Python / C / Go / Java / Rust multi-language development, each backed by a merged PR; PyTorch / LangChain end-to-end (RAG, LoRA/QLoRA fine-tuning, Neo4j knowledge graph); MCP and Skill packaging; hands-on with [CC] / Codex / DSH / Pi.
Focus: AI Agent and tooling development; reinforcement learning (PPO in production); model compression and distillation; AI security background.
Intellectual property: 5 software copyrights (HOSxAI command-line agent software registered 2025R11L0843188; HOS-Sec-Engine / HOS-Critic-Review / HOS-Vibe-Guard / HOS-LS under examination)
Other: English CET-6 | Mandarin Proficiency Level 2B | EFG Entrepreneurship Training Camp (75th cohort) | Computer Proficiency Level 1 | C2 Driver License

Open source contributions (all merged PR)

- Combined hiyouga/LlamaFactory 74,000 Stars # 10626 - Improve the Getting Started Guide document to lower the threshold for fine-tuning large models
- Combined axolotl-ai-cloud/axolotl 74,000 Stars # 3802 - Fix Jinja Chat Template Validation Error Prompt Logic
- Combined vanhauser-thc/thc-hydra 12,000 stars # 1092 Buffer Overflow |#1091 Memory Leaks | etc Total 6 Consolidated Security Fixes PR
- Combined aquasecurity/trivy 38,000 Stars # 11013 - Fix type assertion in Alpine APKINDEX archive read
- Combined zaproxy/zaproxy 16,000 stars # 9411 - HashUtils Resource Leak Fix
- Combined slimm609/checksec 2.3k stars # 349 - Fix kernel.unprivileged_bpf_disabled detection logic
- Combined bytedance/g3 888 Stars # 1103 - Fix unsafe unwrap () call in openssl certificate alignment

Introduce yourself

Engineering where AI applications meet system security: I find the root cause before writing code, and what I ship has to run and be verifiable. Fixes merged upstream and self-built tools that cleared software copyright review are the product of that standard - a combination that is usually indispensable when AI products actually go live.
